

**Looking for an advanced refractory solution
for tilting rotary melting furnaces?**

We have it.

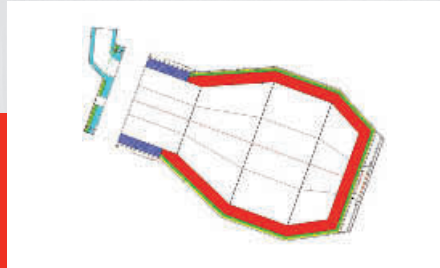

ADVANCED REFRACTORY SOLUTIONS

Patchlite® - Flustone® - Flextrong®

The monolithic solution for tilting rotary melting furnaces.

Eredi Scabini's original solution for tilting rotary melting furnaces combines the features of the products belonging to these three families. It guarantees a lining with low heat losses, excellent "non-wetting" properties and superior mechanical strength.

Main features and advantages

- High-strength, monolithic – joint-free – microporous insulating lining made with Patchlite®
- Working lining made with Flustone® to achieve high mechanical strength and excellent "non-wetting" properties
- Ceramic-matrix composite preformed shapes made with Flextrong® for areas subjected to high mechanical stresses
- Wide range of products for specific applications

**A winning combination for an astonishing result
that sets a new standard of excellence.**
